

Terrazole[®] 350WP

Soil Fungicide

TECH TOPIC

Controls damping off, root & stem rot of ornamentals & turf caused by *Phytophthora* & *Pythium* fungi.

Active ingredient: 350 g/kg Etridiazole

Class: Group 14 fungicide

Terrazole[®] is a systemic fungicide with highly active preventative and curative properties that make it an effective all-round treatment against soil-borne fungi.

Always refer to the label for complete details.

BENEFITS

- Systemic and highly active
- Both preventative and curative
- Flexible application - add to soil, apply as a spray, or use as a dip
- Designed to get to the root zone where maximum protection is needed

STOP THE ROT WITH TERRAZOLE

Stop the Rot

Disease causing fungi are always present in the soil.

When conditions are right they attack. Without protection from soil-borne fungi, growers can suffer significant yield losses due to root damage in crops.

It's what you can't see that could be most destructive to your plants.

A prevention program based on Terrazole makes the soil a better environment for plant growth, allowing the roots to penetrate deeper for more vigorous growth.

Give yourself peace of mind with Terrazole.

Turf

Damping Off and Grease Spot are common names of diseases in turf caused by *Pythium* spp. It is one of the most destructive turfgrass fungi known, and severe disease outbreaks can destroy otherwise healthy turf within days.

Terrazole works best in a preventative program based on continued periodic applications on turf.

Ornamentals

Root Rot and Stem Rot caused by *Phytophthora* spp and Damping Off caused by *Pythium* spp are diseases in bedding plants, herbaceous and woody ornamental plants. Terrazole can be used to prevent and control these diseases.

Application

Terrazole is formulated as a wettable powder. The advantage of this formulation is its flexibility:

- mix with potting mix or soil
- mix in water and apply as a drench or spray
- use as a dip

When mixing with water, apply the required quantity of water into the spray tank. Spray solution must be continuously agitated after initial mixing.

Watering-in after application will maximise penetration of the fungicide into the soil.

Prevention

Use Terrazole in a prevention management system to give plants:

- a healthy start
- the best chance to develop to their full potential

Add Terrazole to your operation as part of an effective rotational soil-borne fungicide program.
